Commentaire de l'essai interlaboratoire

2019 - 3

MQ, Institut für Klinische Chemie, Universitätsspital Zürich, 8091 Zürich
T: 044/255 34 11, F: 043/508 07 02, www.mqzh.ch, info@mqzh.ch

Échantillons de l'essai interlaboratoire
L'homogénéité et la stabilité ont été vérifiées pour tous les échantillons avant respectivement pendant l'envoi et aucune anomalie n'a été constatée. Les tests de conformité ont été réalisés par les laboratoires de l'Hôpital Universitaire de Zürich (http://www.uzl.usz.ch/).
Ont été produits spécifiquement pour MQ en sous-traitance les échantillons d'essai interlaboratoire suivants:
B1 Strep A Test, B2 Uricult, H4 Hématologie parasitaire, K14 Marqueur tumoral

Détermination des valeurs-cible

Pour chaque valeur-cible est indiqué le mode de détermination utilisé selon les termes de la norme ISO17043:2010, B2.1 (Colonne "Type"):
a Valeur connue, sur la base de la production.
b Valeur de référence certifiée lors de l'utilisation d'échantillons spécifiques
c Valeur de référence déterminée par analyse
d „Consensus value" des laboratoires d'experts
e „Consensus value" des participants

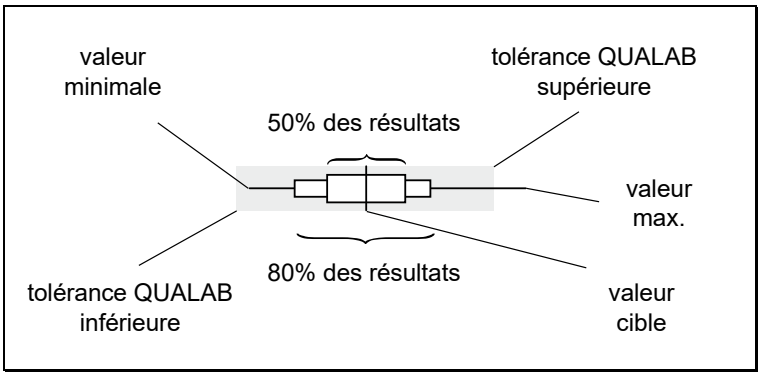
Pour les groupes de méthode incluant plus de 9 participants, les valeurs cibles sont déterminées comme étant la „Consensus value" ("e") des participants. Pour la détermination de ces valeurs cibles est utilisée la moyenne réalisée par le groupe de méthodes. Les résultats qui présentent un écart par rapport à la valeur cible supérieur à 1.5 fois la tolérance Qualab, sont considérés comme résultats aberrants et exclus du calcul de la valeur de référence. Les résultats des essais d'aptitude sont utilisés comme valeur de base pour éliminer les taux aberrants. Afin de mettre à disposition de tous les participants des valeurs-cible les plus pertinentes possibles, d'autres procédures peuvent également être utilisées pour des groupes de méthode plus restreints.

Incertitude dans la détermination des valeurs-cible
L'incertitude-type (u_x) est calculée à l'aide de la formule suivante (ISO13528):
ux= (Valeur-cible/100) * (1.25/Racine carrée du "nombre des participants") * CV en %
- ux est exprimée dans la même unité que la valeur-cible
- ux peut être comparée avec l'écart-type du collectif des participants (Ecart-type=Valeur-cible * CV en % / 100)
- Pour un nombre de participants >18, l'incertitude-type (ux) est significativement plus petite que la dispersion du collectif des participants et peut donc être négligée.

Tolérances QUALAB et MQ
Pour les analyses obligatoires sont utilisées les tolérances fixées par Qualab (www.qualab.ch, contrôle de qualité externe). Pour les analyses non-obligatoires, les tolérances sont fixées par le directeur de MQ pilotant l'essai interlaboratoire.

Si l'incertitude déterminée de la valeur de référence ux est supérieure à 15% de la tolérance QUALAB ou de MQ, la lettre qui caractérise le type de détermination de la valeur-cible est en outre marquée d'une étoile (par exemple "e*"). Nous rendons ainsi les participants attentifs au fait que l'incertitude de la valeur de référence peut avoir une influence sur l'évaluation.

Représentation graphique
La représentation graphique des résultats est la suivante:



Comparaison des appareils

Les données de ce rapport vous permettent de comparer les performances respectives des divers appareils. Toutefois, vous devez tenir compte des points suivants:

- Le contrôle Chimie K1 est un sérum de contrôle commercialisé prêt à l'emploi. Même si l'échantillon est d'origine humaine, des effets matriciels sont possibles. Ceux-ci dépendent de l'appareil et peuvent générer des valeurs cible différentes.
- Seul un échantillon a été mesuré. La dispersion des résultats étant dépendante de la nature de l'échantillon (effets matriciels) et du niveau du résultat, les coefficients de variation déterminés (CV en %) ne sont pas toujours valables.
- Une grande partie des taux aberrants est due à des erreurs administratives (erreur d'unité, confusion des résultats) ou à des erreurs de manipulation (erreur d'échantillon, dissolution incorrecte, mélange insuffisant) et n'a rien à voir avec le type d'appareil.

Zürich, 1.10.2019
